INTRODUCING OUR 1934 LANDSCAPE DESIGN SERVICE

BEAUTIFY YOUR HOME GROUNDS

Home owners in Oregon are fortunate in having such an abounding amount of beautiful evergreen and flowering plants to make the gardens attractive. However, diversity of plant material, climate and soil conditions sometime make the building of a distinctive garden a difficult task. Adding to this task is the design problem, which requires trained and experienced handling in its making.

A FREE OFFER OF HELP

We have recognized these problems of the home owner and have introduced our landscape service department with the express purpose of assisting, free of charge, any who desire help on landscape design problems or who have questions pertaining to garden subjects that are troublesome. eg. (Advice pertaining to arrangement of areas, plant suggestions, seed selection, pool placement and many others.)

EXPERT ADVICE

We have at the head of our landscape service department Mr. C. E.

Corry, who is a recognized expert on landscape architecture. He will give your problems personal attention and advise you freely on subjects in question. We invite you to write Mr. Corry regarding your problems, care of Routledge Seed & Floral Co., Inc.

DRIVE DOWN AND CONSULT WITH US

It may be convenient for you to visit our store, where you may receive first hand advice and suggestions. Bring along a sketch of your home grounds and courteous salesmen will be at your service to give you any information needed or to arrange an appointment for you with Mr. Corry. If a visit is impossible be assured that we will give your letter immediate and careful consideration.

WHAT ABOUT LARGE PLACES?

Home grounds of considerable size, 100x100 ft. or over, will require considerable thought and planning; should, of course, have personal attention and a visit. For such places special arrangements are necessary and our landscape service department is prepared to render such service at a very moderate cost.

NITRAGIN

BENEFITS OF INOCULATION

Inoculated Legumes take nitrogen from the air to supply the plant, resulting in **faster growth, earlier maturity and increased crops.** Inoculated legumes take up more nitrogen than the plant itself requires, the surplus remaining to the benefit of future crops. Inoculated Legumes develop larger roots systems and therefore reach the immense stores of potash and phosphorous in the sub-soil.

GROUND PEAT

Imported—Granulated—A Soil Conditioner Not a Fertilizer

Granulated Peat Moss or Mull is a brown colored virgin soil, formed years ago by the growth and decay of mosses, aquatic plants, decomposed vegetable matter taken from the bottom of drained fresh water lakes. It is dried and packed under pressure into burlap wrapped bales about 3½ feet long and 2 feet square, weighing about 175 pounds. It being shipped to America from Germany and Holland in car lots, yes, even boat load lots. It's a product nurserymen, horticulturists, florists and gardeners have wanted for years. It is a moisture retaining humus; an important aid in saving soil fertility. Adds humus to the soil, making the ground more pliable and improves the general texture and condition. Conserves moisture in light, sandy soil; contributes effective drainage and lightens heavy soil.

Used in landscape work, on and over lawns, vegetable gardens, flower beds and in potting soil, as a mulch over seeds or plants. It is really a wonderful factor in many ways.

Prices: Fine ground for garden and lawn, Original Bale, \$2.50; 2 bu. sacks, 75c. Small lots 3 to 5 lbs. at 6c lb.; 10 to 12 lbs. at 5c lb.

Hints About Gladiolus

Plant in any good garden soil where the sunshine can be relied upon. They will do well in the vegetable garden if space is at a premium. Plant any time after danger of a killing frost has passed. It is a good idea to plant a few every 2 weeks up to June 10-15—and then you will have a supply of flowers coming along all summer and fall. Average blooming time is 90 days from date of planting.

Mass the bulbs in rows or beds. 2 to 4 inches apart. Plant 3 to 4 inches deep, the larger the bulb the deeper planted.

Keep the soil loose by frequent cultivation after watering. Water enough to keep the soil moist but not wet.

Glads are the king of cut flowers. In cutting care should be exercised to leave at least 4 leaves to feed the new bulb. Cut down along the stalk on each side and then cut the stalk out, leaving the leaves to feed the new bulb.

After frost in the fall dig your bulbs and cut the tops close to the bulb as possible. Store in a cool dry place away from any danger of freezing. **DO NOT LEAVE YOUR BULBS IN THE GROUND.**
